Westphalia Press, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.The world is not running out of water. As we learn in our early school years, the water cycle continues, with water changing state and location as it moves through the cycle and around the globe. However, we do have a very serious water management challenges. Water resources are unevenly spread around the world and access to water, even to meet basic human needs, is far from equitable. Some communities are challenged with too little water, resulting in drought, famine, and reduced development opportunities. Water scarcity affects more than 40% of the global population, with 633 million people without access to improved water resources and two thirds of the world's population living in those areas that experience water scarcity for at least 1 month a year (United Nations 2017). In June 2015 the Organization for Economic Co-operation and Development (OECD) released its OECD Principles on Water Governance (OECD 2015). The Principles on Water Governance were developed on the premise that there is no one-size-fits-all, but that governance is highly contextual, that water policies need to be tailored to different water resources and places, and that governance responses have to adapt to changing circumstances. The Principles aim to enhance water governance systems that help manage too much, too little, and too polluted water in a sustainable, integrated, and inclusive way, at an acceptable cost, and in a reasonable time-frame. In this Issue we present a journey through the lens of six existing frameworks in Europe, Asia-Pacific, Africa, and South America to understand contextual factors enhancing or constraining water governance, and made suggestions to support practical implementation of the principles through better governmental action and stakeholder involvement. We trust that you will enjoy this introduction...
