Forgotten Books. Paperback. Condition: New. This item is printed on demand. 270 pages. Dimensions: 9.0in. x 6.0in. x 0.6in. Excerpt from An Elementary Treatise on Frequency Curves and Their Application The fact that actuarial science is fundamentally a branch of biology rather than of mathematics is overlooked far more generally than ought to be the case. Most people, even those of education and wide culture, are inclined to look upon an actuary as a particularly crabbed, narrow, and intellectually dusty kind of mathematician. In reality his subject is one of the liveliest in the whole domain of biology, and none surpasses it in its practical interest and importance to mankind. Because, what the actuary is, or at least should be, trying always to formulate more and more definitely are the laws which determine the duration of human life. Why the actuary in fact is too often intellectually but little more than a sort of glorified computer, is really only the result of a defect in the teaching of biology in our colleges and universities. It has only lately come to be recognized anywhere that a biologist needed a substantial foundation in mathematics in order successfully to practice a biological profession. It is not too rash a prediction to say that presently the time is coming when no important actuarial post will be held by a mathematician who knows little or no biology. The vigor and originality of his biological outlook will be valued as highly as the rigidity of his mathematical substructure now is.
